JUMO mTRON Controller module

Brief description

The unit is a module of the JUMO mTRON control and automation system. The plastic housing measures 91 mm x 85.5 mm x 73.5 mm (W x H x D) and is mounted on a standard rail.

Using the function blocks ramp, maths, controller and limit comparator, it is possible to build up a great variety of automation structures. Each of the analogue inputs is monitored against adjustable limit values. In addition to four definable setpoints the memory stores two controller parameter sets. A fully developed auto-tuning function automatically adapts the controller to the characteristics of the process.

In addition to two logic inputs there are 2 analogue inputs for standard signals, Pt100 and thermocouples. There are 2 switching outputs and one analogue output. The analogue inputs and the analogue output can be configured without hardware changes. The controller module incorporates a network connection for data interchange.

A screened twisted pair is used as transmission line. There is a setup interface for module parameter setting and configuration from a PC under the JUMO mTRON-iTOOL project design software. The electrical connections are made through plug-in connectors with screw terminals.

Type 704010/0-...

Block structure

2 analogue inputs

for Pt 100, thermocouples, standard signals, potentiometer, resistance or AC current.
 Functions:
 - control variable
 - external setpoint
 - input variable for maths functions
 - input variable for the limit comparator
 - output of measurements to the network
 - stroke retransmission
 - heater current monitoring

2 logic inputs

for floating contacts, TTL or CMOS level
 Functions:
 - setpoint changeover
 - ramp reset
 - ramp stop
 - ramp inactive
 - changeover to manual operation
 - start of self-optimisation
 - parameter set switching

Input

network variables

Analogue network variables
 Logic network variables

Setup interface

for configuration and parameter setting

JUMO mTRON-iTOOL

Functions:
 - linking to other JUMO mTRON modules
 - configuration and parameter setting
 - project archiving
 - online process diagnostics

3 outputs

2 switching outputs (e. g. relays) and 1 analogue output
 Functions:
 - controller output 1
 - controller output 2
 - limit comparator output
 - operation via a network variable
 - measurement 1 + 2
 - maths function

Output

network variables

Analogue network variables
 Logic network variables

JUMO mTRON
Operating unit

1. LON[®] = Local Operating Network
 Registered trademark of the
 ECHELON Corporation

Features

- **Maths functions**
 Difference, humidity, ratio, square root, square, minimum, maximum, absolute value, sum, product, mean value
- **Ramp function**
 Setpoint ramp for a time-defined approach of the process to the setpoint
- **Limit comparator**
 Comparator and window functions, direct or reversed
- **Switching setpoint/parameter set**
 Facility for switching between 4 setpoints and 2 controller parameter sets through logic inputs and network variables.
- **Range monitor**
The analogue inputs are monitored against defined limit values
- **Cascade output**
 Conversion of the setpoint input for an external slave controller
- **Setup interface**
 For configuration and setting of parameters, the module is linked to a PC via a PC interface
- **Plug & Play function**
 Problem-free replacement of modules without re-configuration

Technical data

Hardware inputs

Analogue inputs

Measurement input

- resistance thermometer
- thermocouples
- standard signals (current/voltage)
- AC current (50/60Hz sinusoidal)
- resistance
- potentiometer

Sampling time

420msec for all inputs

Functions

- control variable
- limit comparator
- maths function
- network output
- external setpoint
- heater current monitoring
- stroke retransmission
- analogue output

Sensor	Measurement range ¹	Internal resistance/voltage drop	Measurement circuit monitoring		Resolution	Measurement accuracy

1. The accuracy given refers to the ranges given in brackets. With thermocouples, the accuracy is obtained only in the specified operating position and after an operating time of at least 1 hour.

Displays and controls

(1)	Status LED, yellow for the logic outputs K1 and K2; lights up when relay is energised or logic output is activated	(4)	Installation key the module reports to the JUMO mTRON-iTOOL project design software or the operating unit
(2)	Service LED, red - lights up on operating fault - flashes when the mechanical con- nection to the module from JUMO mTRON-iTOOL or the operat- ing unit is being checked by a test signal ("wink"). - long flashing pulses (3 sec on, 1 sec off) when a Plug & Play fault occurs	(5)	Setup interface for the PC interface line which links the module to the PC
(3)	Switch for the termination resistance of the LON network	(6)	Power LED, green lights up when the supply is switched on

Logic inputs

activation: floating contacts,
TTL or CMOS level

Functions:

- setpoint selection
- ramp reset
- ramp stop
- ramp inactive
- changeover to manual operation
- start autotuning
- parameter set switching

Hardware outputs

Analogue output

Signal	Burden
0 – 10V	500Ω min.
2 – 10V	500Ω min.
0 – 20mA	500Ω max.
4 – 20mA	500Ω max.

Accuracy: 0.25 %
Resolution: 16 bit

Functions:

- controller output 1 or 2
- output of a maths function
- output of a network variable
- output of a measurement value of
the analogue inputs

Switching outputs

Functions:

- controller output 1 or 2
- limit comparator output
- output of a network variable

Relay outputs

Type: changeover contact
Nominal voltage: 250V
Nominal current: 3A
Contact rating: 3A, 250V AC
resistive load
Life: 5·10⁵ operations
on resistive load
Contact material: AgCdO (hard gold plated)
Contact protection circuit:
Varistor (make contact only)
Minimum load: 10mA 5V DC

Solid-state relay output

Type: 1A 250V AC
Overvoltage protection: varistor

Logic output

Type: 0/12V
internal resistance: 600Ω

Input

network variables

Analogue network variables

Functions:

- external setpoint
- maths function
- ramp start
- external control variable
- stroke retransmission
- manual control output
- additive disturbance
- multiplying disturbance
- analogue output

Logic network variables

Functions:

- setpoint selection
- ramp reset
- ramp stop
- ramp inactive
- changeover to manual operation
- start of self-optimisation
- parameter set switching
- direct operation of the relays

Output

network variables

Analogue network variables

Output cycle:

420msec – 8.4sec, adjustable

Functions:

- measurement analogue input 1
- measurement analogue input 2
- process variable
- setpoint
- setpoint output for slave controller
(cascade control)
- controller analogue output 1
- controller analogue output 2

Logic network variables

Output cycle: controlled by event,
but at least every 6sec

Functions:

- limit comparator output
- monitoring the analogue inputs
- monitoring function for the
network inputs (combined alarm)

Controller structures

Controller type	Controller struc- ture
1-setpoint controller	P, I, PI, PD, PID
2-setpoint controller	P, I, PI, PD PID
Proportional controller.	P, I, PI, PD, PID
Modulating controller	PI, PID
Proportional control- ler with integral actuator driver	P, I, PI, PD, PID

General data

Electrical safety

as per EN 61010-1
 Overvoltage category: II
 Pollution degree: 2

Environmental influences

Operating and ambient temperature:
 0 to 55°C
 Permitted storage temperature:
 -40 to +70°C
 Relative humidity: rH 80 % max.
 Electromagnetic compatibility
 as per EN 61326-1

- interference emission:
 Class A - Only for industrial use -
- interference immunity:
 to industrial requirements

Housing

Material: plastic,
 self-extinguishing
 Flammability Class: UL 94 VO
 Protection: IP20 (as per EN 60529)
 Mounting: on standard rail

Supply

110 – 240 V AC, +10/-15%, 48 – 63 Hz,
 or 20 – 53 V AC/DC, 48 – 63 Hz
 Power consumption: 5 VA max.

Network (LON interface)

Transceiver: free topology FTT-10A
 Topology: ring, star, line or
 mixed structure
 Baud rate: 78 kbaud
 Max. lead length (depending on lead type):

line:	2700m
star:	500m
ring:	500m
mixed:	500m

Max. number of modules: 64

Operation and project design

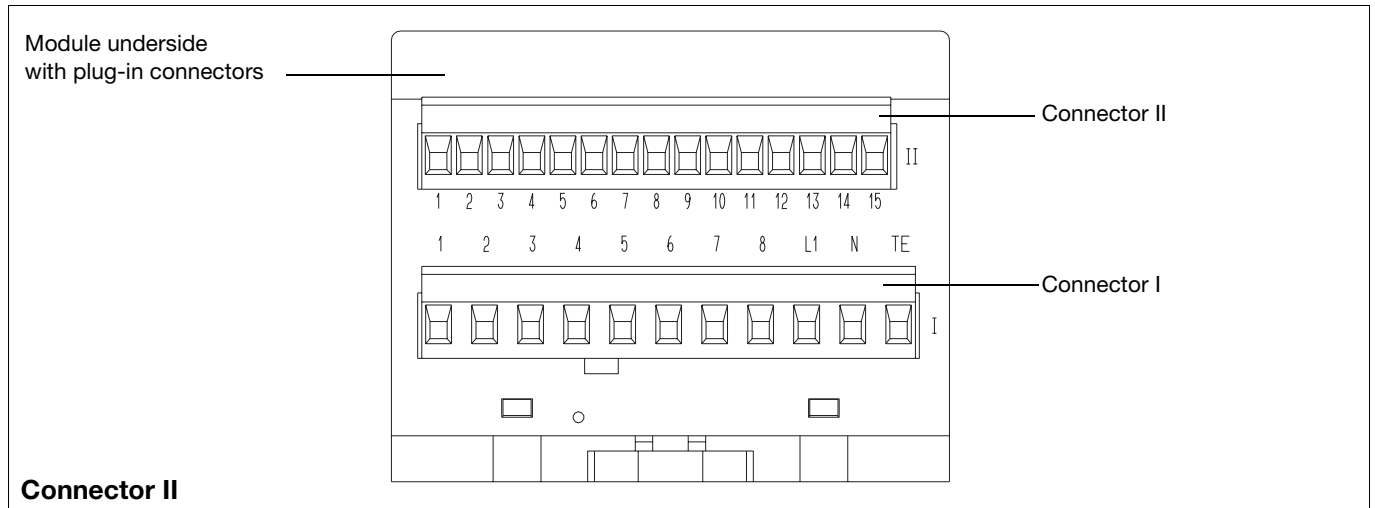

Operation, parameter setting and configuration of JUMO mTRON modules can be carried out from the JUMO mTRON operating unit.

The JUMO mTRON-iTOOL project design software permits convenient design and start-up of a JUMO mTRON system.

The projects can be archived and documented. Individual modules are linked via LON by assigning network variable (NV) names.
