Analog input module

Brief description

The unit is a module of the JUMO mTRON control and automation system. The plastic housing measures 91 mm x 85.5mm x 73.5mm (W x H x D) and is mounted on a standard rail.

The module has four universal analog measurement inputs which can be monitored against adjustable limit values, one logic input, one counter input, one math function and a customized linearization which can be used for capturing and processing the measurement. There is also a selectable comparator function with switch-on and switch-off delay, as well as latching and gate circuit.

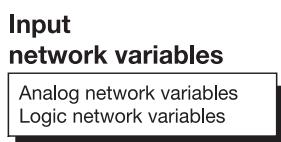

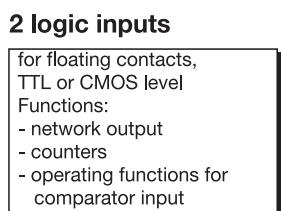

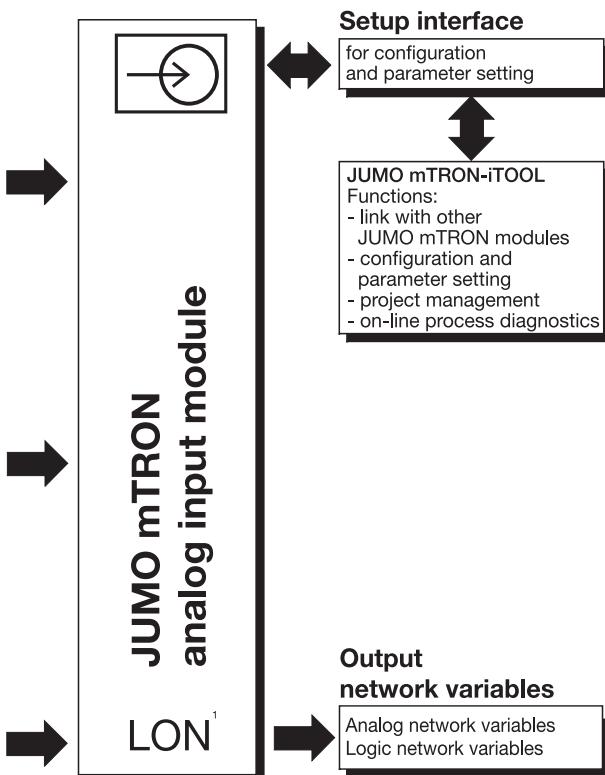

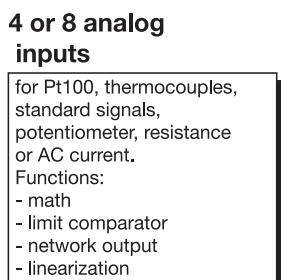

The analog input module incorporates a network connection for communication and data interchange between the modules. Numerous process and status signals can be exchanged with other units via the network.

A screened twisted pair is used as transmission line.

There is a setup interface for module parameter setting and configuration from a PC under the JUMO mTRON-iTOOL project design software.

The electrical connections are made through plug-in connectors with screw terminals.

Block structure

Features

■ Math functions

Difference, humidity, ratio, square root, square, minimum, maximum, absolute value, sum, product, mean value

■ Limit comparator

Comparator and window functions, direct or reversed, with switch-on and switch-off delay, also latching and gate circuit

■ Customized linearization

Linearization function with up to 21 calibration points

■ Range monitoring

The analog inputs are monitored against definable limit values

■ Setup interface

For configuration and parameter setting the module is linked to a PC via a PC interface

■ Plug-&-Play-Function

Problem-free replacement of modules without re-configuration

1. LON® = Local Operating Network.
 Registered trademark of the
 ECHELON Corporation.

Type 704020/...

Technical data

Hardware inputs

Analog inputs

Measurement input

- resistance thermometer
- thermocouples
- standard signals (current/voltage)
- AC current (50/60Hz sinusoidal)
- resistance
- potentiometer

Sampling time

420 msec for all inputs

Functions

- network output
- math function
- customized linearization
- limit comparator

Logic input

activation: floating contact,
TTL or CMOS level

Functions:

- network output
- operating input
- for the comparator function

Frequency input

activation: floating contact,
TTL or CMOS level
maximum counting rate: 15 kHz

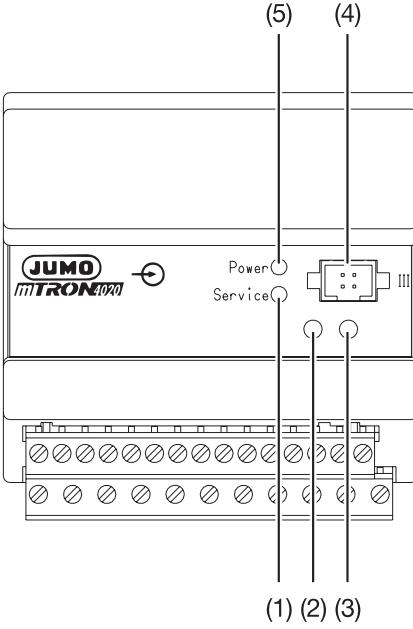

Note: The quoted measurement accuracy is only valid if all analog inputs have sensors connected.
Unused analog inputs must be shorted by a wire jumper.

Sensor	Measurement range ¹	Internal resistance/voltage drop	Meas. circuit monitoring		Resolution	Measurement accuracy	
			Recognition of sensor break	Recognition of sensor short-circuit		Maximum measurement error ¹ at 23°C	Ambient temperature drift per 10°C

X: recognized – : not recognized

- The accuracy given refers to the ranges given in brackets. With thermocouples, the accuracy is obtained only in the specified operating position and after an operating time of at least 1 hour.

Displays and controls

(1)	Service LED, red - lights up on operating fault - flashes when the mechanical connection to the module from JUMO mTRON-iTOOL or the operating unit is being checked by a test signal ("wink")	(4)	Setup interface for the PC interface line which links the module to the PC
(2)	Switch for the termination resistance of the LON network	(5)	Power LED, green lights up when the supply is switched on
(3)	Installation key the module reports to the JUMO mTRON-iTOOL project design software or the operating unit		

Input network variables

Analog network variables

Functions:

- math function
- customized linearization
- limit comparator

Logic network variable

Function:

- operating input for the comparator function

Output network variables

Analog network variables

Output cycle: 420 msec — 8.4 sec, adjustable

Functions:

- measurement analog input 1 — 4 (8)
- output for math
- output for linearization 1 — 4 (8)

Frequency input

Output cycle: 0.8388608 sec

Function:

- output of the pulses counted at fixed intervals

Logic network variables

Output cycle: event-controlled but at least every 14 sec

Functions:

- limit comparator output
- output of the logic input
- monitoring of the analog inputs
- monitoring of the network inputs (combined alarm)

General data

Electrical safety

as per EN 61010-1

Overvoltage category: II

Pollution degree: 2

Environmental influences

Operating and ambient temperature:

0 to 55°C

Permitted storage temperature:

-40 to +70°C

Relative humidity: rH 80 % max.

Electromagnetic compatibility as per EN 61326-1

- interference emission:

Class A - Only for industrial use -

- interference immunity:

to industrial requirements

Housing

Material: plastic,

self-extinguishing

Flammability Class: UL 94 VO

Protection: IP20 (to EN 60 529)

Mounting: on standard rail

Supply

110 — 240 V AC +10/-15%, 48 — 63Hz, or 20 — 53 V AC/DC, 48 — 63Hz

Power consumption: 5 VA max.

Network

(LON interface)

Topology: free topology FTT-10A (ring, star, line or mixed structure)

Baud rate: 78 kbaud

Max. lead length (depending on lead type):

line: 2700m

star: 500m

ring: 500m

mixed: 500m

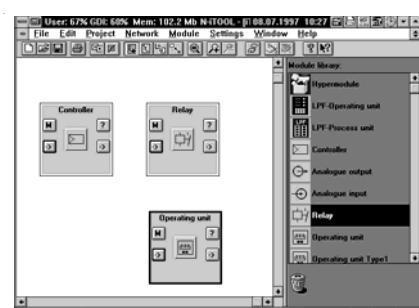

Max. number of modules: 64

Operation and project design

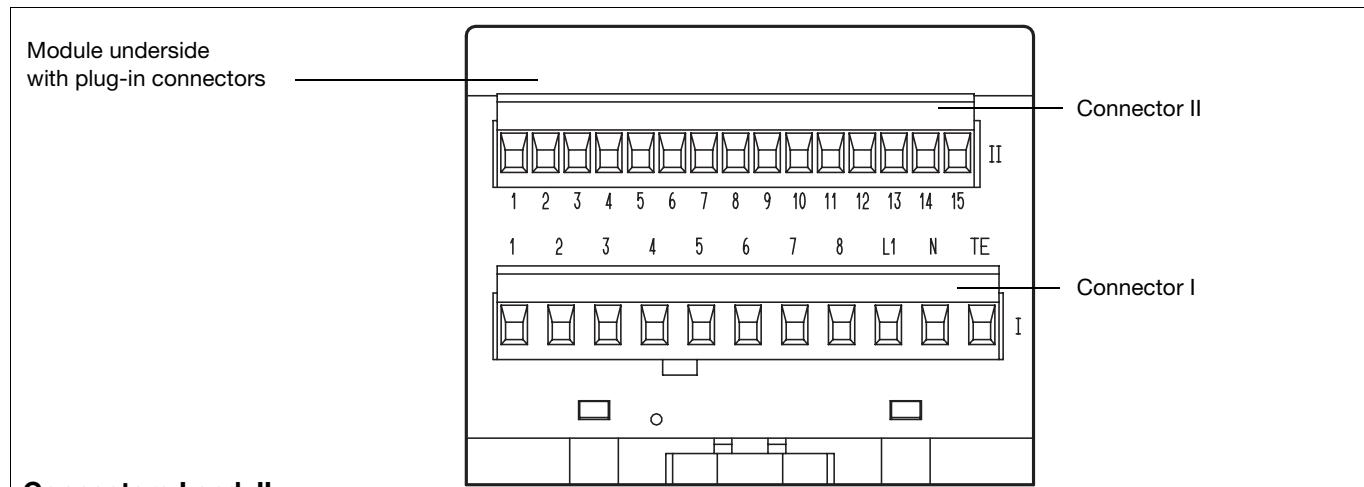

Operation, parameter setting and configuration of JUMO mTRON modules can be carried out from the JUMO mTRON operating unit.

The JUMO mTRON-iTOOL project design software permits convenient design and start-up of a JUMO mTRON system.

The projects can be archived and documented. Individual modules are linked via LON by assigning network variable (NV) names.
